

**MOVE
TO GREEN**

The future of mobility is electric

Electric mobility Plug, charge and go!

With an electric scooter and vehicle, you can be part of the green transformation.

A handful of reasons why you should drive the zero emissions way:

- ✓ *Reduce your carbon footprint*
- ✓ *Eliminate CO2 emissions*
- ✓ *Reduce air and noise pollution*
- ✓ *Benefit from using renewable energy sources*
- ✓ *Support Global SDG 2030*

Our “Move to Green Starter Pack” includes everything you need.

... are you ready to go green?

Most organizations have developed green policies, yet at times wrestle when it comes to converting green ambitions into tangibles. At KJAER & KJAER A/S we feel it is too important not to try.

Instead of waiting for the market to request the green change, we want to offer a green choice and zero emission mobility in a plug-and-go solution. An affordable choice that can get your office started and replace many trips with a zero emission mode of transport.

ZERO EMISSION
